Introduction to Flutter

Flutter is Google's UI toolkit for building beautiful, natively compiled applications for mobile, web, and desktop from a single codebase. It is very easy to learn and currently it is getting more and more popular. With this blog post, you will learn some basic stuff about Flutter and after reading it, you will be able to create a simple application using this technology.

Prerequisite Tools & Setup

1. Install Flutter & Android Studio

You have to download and setup flutter from flutter.dev. You can follow documentation with your own device.

Windows: <https://docs.flutter.dev/get-started/install/windows>

Mac: <https://docs.flutter.dev/get-started/install/macos>

Linux: <https://docs.flutter.dev/get-started/install/linux>

Video Tutorial: https://www.youtube.com/watch?v=hfz_AraTk_k&ab_channel=GeeksforGeeks

Android Studio:

https://developer.android.com/studio?gclid=CjwKCAiAiKuOBhBQEiwAId_sK4X0PLQrES_2pG_S8nPfIAIgWSOCUEqRRAfPbS4AmR5mXmU6hIhvHxoCfBgQAvD_BwE&gclsrc=aw.ds

Getting Started (Build & Run)

1. Download and find your project folder, and use your preferred IDE (Android Studio / Visual Studio Code / IntelliJ IDEA) to run the project.
2. After you loaded project successfully, run the following command in the terminal to install all the dependencies listed in the pubspec.yaml file in the project's root directory or just click on Pub get in pubspec.yaml file if you don't want to use command.

```
Flutter pub get
```

3. After the app build completes, you'll see the app on your device.
4. If you don't use Android Studio or IntelliJ you can use the command line to run your application using the following command

```
flutter run
```
